

My name is Mohamed Abdelhadi, and I am from Algeria. I am a passionate technology enthusiast with a strong background in web and mobile application development. Throughout my academic and professional journey, I have developed strong technical skills while also understanding the growing importance of innovation and digital transformation in modern societies.

I hold a Licence degree in Marketing and a BTS diploma in Web Development. This combination of business knowledge and technical education has given me a unique perspective on how technology can solve real-world problems. It allows me to understand both organizational needs and technical implementation, enabling me to build digital systems that are not only functional but also valuable for users and businesses.

During my BTS studies, my final project involved developing a mobile application. This project allowed me to gain practical experience in software development, teamwork, and project management. It strengthened my passion for software engineering and motivated me to further explore how secure and reliable digital systems are designed and maintained.

Professionally, I work as a Web and Mobile Application Developer. I first joined Talaba Store as an intern, where I completed a five-month internship contributing to the development of web and mobile applications. After successfully completing my internship, I was offered the opportunity to continue working with the company as a developer. This experience allowed me to work on real platforms and develop solutions used by actual users.

One of the major projects I contributed to is MazadClick, the first online auction platform in Algeria. This platform enables users to participate in digital auctions and demonstrates how technology can transform traditional marketplaces into modern digital services. I also worked on LaboMarket, a platform that connects laboratories with suppliers, helping improve efficiency within the healthcare supply chain. In addition, I participated in the development of a specialized social media application designed exclusively for doctors in Algeria, allowing professionals to communicate, collaborate, and share knowledge securely.

Alongside my professional experience, I continuously work on strengthening my technical knowledge. I completed the CCNA1 certification through Cisco Networking Academy and I am currently studying CCNA2. These studies have helped me build a strong foundation in networking concepts and cybersecurity principles.

Today, the world is becoming increasingly digital. Businesses, governments, healthcare systems, and individuals rely heavily on online services, cloud computing, and digital platforms to manage their information and operations. While this digital transformation creates many opportunities, it also introduces serious cybersecurity risks. Protecting systems, applications, and data from cyber threats has become a critical global challenge.

This global digital shift is the main reason I decided to pursue a Master's degree in Cyber Security. With my background in web and mobile development, I understand how digital platforms are built and how vulnerable they can be if security is not properly implemented. I want to develop advanced skills in areas such as network security, ethical hacking, and digital risk management in order to help organizations build secure and reliable systems.

I chose Nottingham Trent University after carefully researching universities in the United Kingdom. I was particularly impressed by the university's strong reputation for combining theoretical knowledge with practical learning in its Cyber Security programme. In technology fields, practical experience is

just as important as theoretical understanding, and I believe this balance will help me develop the professional skills necessary to succeed in cybersecurity.

Receiving a scholarship would significantly support my academic journey and allow me to fully dedicate myself to developing advanced cybersecurity expertise. This opportunity would enable me to focus on my studies, participate in research and practical projects, and gain the knowledge and skills necessary to contribute effectively to the cybersecurity field.

In the future, I aim to use the knowledge and experience gained from my studies to contribute to strengthening cybersecurity awareness and innovation in Algeria. I also hope to collaborate with international technology communities and participate in developing secure digital solutions that support economic and technological growth. I am highly motivated, committed to continuous learning, and eager to contribute positively to the academic environment and to the future of secure digital technologies.
